Tier II and Tier III Literacy Instruction

Prevention of Reading Difficulties

Tier II

The **Rules for Administration of The Colorado Reading to Ensure Academic Development (READ) Act** describe the attributes of effective targeted and intensive instructional intervention. The attributes of a multi-tiered system of support contribute to more meaningful identification of learning problems related to literacy achievement, improve instructional quality, provide all students with the opportunity to learn to read, assist with the identification of learning disabilities specific to learning to read, and accelerate the reading skills of advanced readers.

Effective Targeted and Intensive Instructional Intervention

- Addresses one or more of the five components of reading with intentional focus on identified area(s) of deficit according to interim and diagnostic assessments
- Delivered with sufficient intensity, frequency, urgency, and duration
- Guided by data from diagnostic, interim and observation data, focused on students' areas of need
- Utilizes a scope and sequence that is delivered explicitly with judicious review, allowing for active and engaged students
- Delivered in a small group format

Tier II supplemental instruction addresses the needs of students who are not adequately progressing in a general education classroom. These students may be at-risk for reading difficulties. Tier II instruction should support and augment Tier I instruction with the goal to get students back on track to meet goals. Supplemental instruction must start as soon as possible, within 2 weeks after students have been identified as being at moderate or high risk on interim testing. This instruction should be done in addition to Tier I instruction. The aim is to supplement, rather than replace, core reading instruction.

Tier III Instruction

How does Tier III instruction differ from Tier II instruction?

As with Tier II instruction, Tier III instruction should be systematic, explicit individualized instruction that is specifically tailored for a particular student. Materials for both Tiers II and III should be scientifically based and emphasize the critical elements of basic effective reading instruction. Programs for Tier III may be the same or different than Tier II, depending on the needs of the student. Modifications for Tier III instruction may include the following:

- Redefining the group size
- Providing additional instructional time
- Providing additional intervention time (before or after school)

Consideration for effective Tier II and Tier III Interventions

Students that are eligible for Tier III have not met benchmark goals with Tier II interventions and are in need of additional instructional opportunities that may include adjusting the following:

- Range of examples
- Task difficulty
- Task length
- Type of response

Tier II to Tier III Flow Chart

Checklist for Tier II and Tier III Reading Interventions

Type of reading difficult	y Important features of intervention
All Types of difficulties	Group size is appropriate to the child's needs, with homogeneous groups.
	Intervention time is appropriate for the child's needs.
	Intervention and instruction are clear and engaging.
	Intervention is well integrated with components of tier I curriculum and instruction
	If the child is capable of independent reading, he or she is reading reasonably engaging texts at ar
	appropriate level of difficulty (independent level) with appropriate teacher monitoring and
	guidance.
Word decoding difficulties	Intervention employs explicit, systematic, synthetic phonics
	Intervention targets the child's specific decoding needs (word pattern difficulties are identified
	using diagnostic assessment data and are taught in order of difficulty)
	A child who is identified as having difficulty with phonemic awareness is provided PA intervention
	in addition to phonics intervention
	Intervention provides appropriate examples of words for the child to decode that fit the phonics
	generalization being studied and the interventionist provides appropriate feedback to the child's
	errors (pointing to letters or parts of words that a child may have overlooked)
	The child has sufficient practice in oral reading of text containing words he or she is capable of
	decoding at his or her instructional level, using decodable text with the guidance of a teacher
	Explicit, systematic spelling instruction is well integrated with the decoding intervention
	Automaticity of word reading is included to increase fluency in oral reading of connected text for
	students who have low ORF rates
Comprehension- based	Comprehension is taught explicitly and systematically with an emphasis on important
difficulties	comprehension abilities, teaching comprehension strategies if appropriate.
	The intervention targets the student's specific comprehension needs (inference versus
	vocabulary, versus knowledge about the text structure)
	Vocabulary intervention includes morphology instruction and is integrated with comprehension
	intervention
	The interventionist is sensitive to possible sources of poor comprehension such as word meanings
	that interfere with comprehension.
	Open ended comprehension questions are asked before, during and after reading and encourage
	thinking and discussion.
	The intervention includes oral language activities that strengthen the child's listening skills in
	addition to reading activities in order to develop comprehension.
	The child reads instructional level text that provide ample opportunities to apply the
	comprehension skills being taught.
	The interventionist provides immediate feedback to student's incorrect responses to
	comprehension questions and models how to use appropriate strategies to correctly answer
	questions.
	Intervention includes writing activities that develop vocabulary and increase reading
	comprehension.
	The intervention addresses oral reading prosody of oral reading fluency, if appropriate.
